

Claims

1. Unsaturated oligophenol cyanates of the formula

in which A is in each case a group of the formula

and B is in each case a group of the formula

wherein R^1 , R^2 and R^3 are in each case hydrogen or a bond to a group B with the proviso that each group A has either one or two bonds to B; both R^4 and R^4' , and R^5 and R^5' are in each case either together a direct bond or are hydrogen and a bond to a group A with the proviso that each group B has either one or two bonds to A; the indices m and n are 0 or 1 and x is an integer from 0 to 10 with the proviso that at least one of the numbers m , n and x is other than 0 and m and n are not both at the same time 1, and mixtures thereof with one another and/or with those compounds of the formula I in which n and m deviate from the above definitions by both being 1.

3. Process for preparing unsaturated oligophenol cyanates according to Claim 1, characterized in that an oligophenol of the general formula

4. Use of the unsaturated oligophenol cyanates according to Claim 1 as matrix material for fibre-reinforced composites.

5. Use of the unsaturated oligophenol cyanates according to Claim 1 as radiation-curable varnishes, resists, lacquers and coatings.

A handwritten diagram illustrating a transformation. On the left, the word "add" is written in a simple, rounded script. A large, hand-drawn arrow points from "add" to the right. On the right, the word "add" is written again, but with "D2" written below it. This entire pair is enclosed within a hand-drawn diamond shape.
